II. License

As the regulation of ThemeForest license, you are allowed to use this theme's license due to create only one single End Product for yourself or a client. End Product is the final website that is customized according to your content. In short:

What is allowed with single regular license?

1. You can create one website for yourself or for your client; also you can transfer that single website to your client without any fee. This license is then transferred to your client.
2. Each license of the theme is used for one complete-website. Thus, if you want to have the same website for another client, you have to purchase another regular license.
3. You can install the theme on your test server for testing/development purposes. For this case, the installation shouldn't be available for the public.
4. You can modify or manipulate the theme; or combine it with other works to create the End Product.
5. An updates for that End Product (website) are free.

What is not allowed?

1. With a single regular license it is not allowed to create multiple websites. When you want to install the theme for multiple websites, you need to purchase multiple regular licenses.
2. Multi-store Magento installations are not allowed with single regular license.

To be specific, each regular license entitles you to use the theme for only a store (store/domain/subdomain). For multiple websites you need to purchase multiple regular licenses.

For more information about licenses please refer to ThemeForest:

• License FAQ: http://themeforest.net/licenses/faq

• License comparison table: http://themeforest.net/licenses

• Regular license details: http://themeforest.net/licenses/regular

• Extended license details: http://themeforest.net/licenses/extended

III.   Installation

There are 2 options to install theme: theme package installation and quickstart package installation.
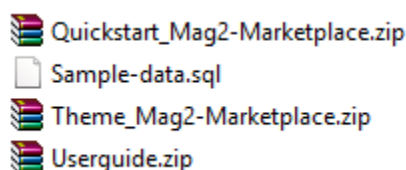

1.   Prepare Installation

- We recommend you to duplicate your live store on a development store and try installation on it in advance.
- Backup magento files and the store database.
  It's very important to backup all of themes and extensions in Magento before installation, especially when you are working on a live server. We strongly recommend you to do not omit this step.
- Disable all cache related section that you have in your magento.
- Upload the theme files.(refer Next Part Theme Files Upload)
- Active Netbase Extensions, open command line in folder root of magento and run commands via ssh using putty or others, php bin/magento setup:upgrade

Sometimes your site is broken, after run this command, it's because of you ran this command with the incorrect user. If your site was broken, it's very important to set the file's permissions and ownership correctly, after run this command line. You can refer this command chown -R <owner>:<group> <magento root directory path>.

- Select "Netbase Multistore" theme in Stores > Configuration > General > Design > Design Theme > Design Theme for Magento 2.0.x version, and select "Netbase Multistore" theme in Content > Design > Configuration page for Magento 2.1.1 version.

- Download the install package and unzip it:

    Quickstart_Mag2-Marketplace.zip
    Sample-data.sql
    Theme_Mag2-Marketplace.zip
    Userguide.zip

2.   Theme Package Installation

Step 1: Theme Files Upload

- Log into your hosting space via a FTP software. ie, FileZilla
- Unzip Theme_Mag2-Marketplace.zip Theme Package -> and upload all directories (There are 2 directories – app and pub) to magento 2 root directory.
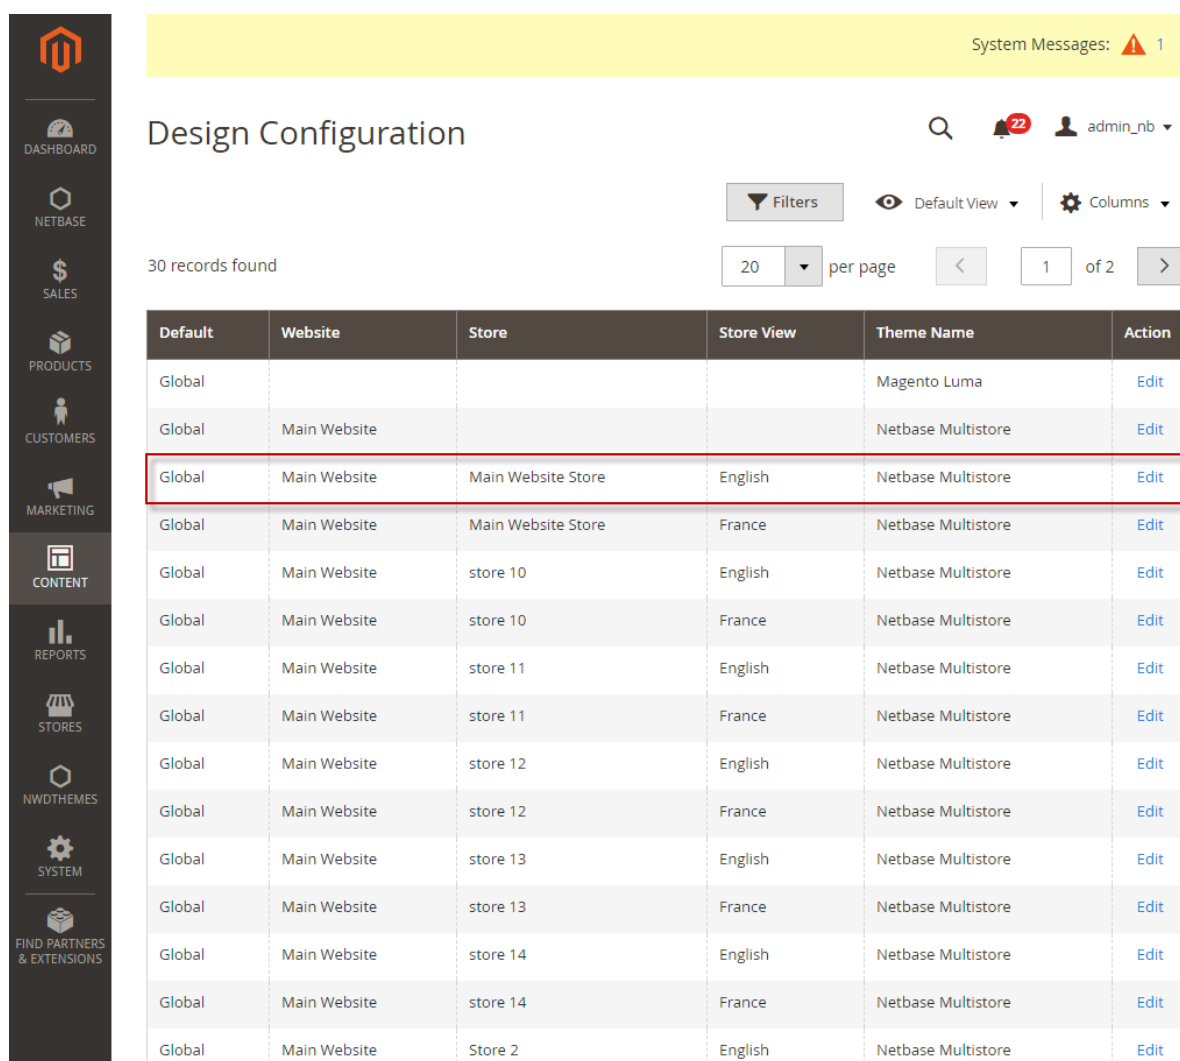

Step 2: Active theme

Active Netbase Extension, open command line in folder root of magento and run commands via ssh using putty or others, **php bin/magento setup:upgrade**

Back On Top

4

Step 3: Select Design

- Select "**Netbase Multistore**" theme in *Stores > Configuration > General > Design > Design Theme > Design Theme* for Magento 2.0.x version.

- With Magento 2.1.x version, you go to *Content > Configuration in Design, you click on section your store (suggest "Main Website Store") to edit theme name-> select "Netbase Multistore" theme*

Default	Website	Store	Store View	Theme Name	Action

Step 4: Demo Installation

In order to do demo installation, you should import static Blocks and CMS pages in NETBASE > Settings Panel > Installation.

Click 2 "Import" buttons to prepare demo installation.

Installation

Import Static Blocks

Import Static Blocks

Overwrite Existing Blocks
[store view]
Yes

If the identifiers of the static blocks are already exist but you want to overwrite them. You can set to "Yes" then save the configuration, then click the "Import Static Blocks" button.

Import CMS Pages

Import CMS Pages

Overwrite Existing Pages
[store view]
Yes

If the identifiers of the cms pages are already exist but you want to overwrite them. You can set to "Yes" then save the configuration, then click the "Import Static Blocks" button.

Import Demo Version Settings

Demo 1

Step 5: Select demo.

Our theme provide for you 3 home page demos, you can choose one of 3 demos to show your home page.

Import Demo Version Settings

Demo 1

Demo 2

Demo 3

3.   Quickstart Package Installation

Quickstart Files Upload

Step 1: Unzip Quickstart_Mag2-Marketplace.zip

7

Back On Top

Step 2: You copy unzipped file to your "root htdocs" folder -> rename as you want.

Step 3: In your database, you create a new database and find

📄 Sample-data.sql in folder package. Then, you import this file in database that you've create.

Step 4: After you import database file successfully, you write URL:

http://yourdomain/foldername

Note: folder name is the quickstart file name that you 've renamed in Step 2

Step 5: After you enter the above url, it will appear notification as image below:

You click on button **"Agree and Setup Magento"**. Then, you fill full your website information in next step.

After you install successfully, you run command line:

php bin/magento setup:static-content:deploy

php bin/magento cache:clean

IV. Setting

1. Theme Setting Panel

Login admin; click on **NETBASE > Settings Panel > Sun – Theme Setting**.

You can change options, settings for your store here. Then, you should

disable cache before setting and enable after finish.

1.1. Header

The Header is divided into 3 parts: The Top Header, the Middle Header and The Bottom Header.

Notes: To setting header type, you have to read 3 parts of header carefully: Elements of header, "Custom Block" icon in header and Import header demo.

1.1.1. Elements of header

✓ **Elements of the Top Header**

Header - Top

Show Top Header [store view]	Yes ▼
Column Layout Header Top Left [store view]	6/12 ▼
Select Elements In Header Top Left [store view]	Language Currency Search Cart User **Logo** Menu Static Block
Column Layout Header Top Center [store view]	Do not show ▼
Select Elements In Header Top Center [store view]	Language Currency Search Cart User **Logo** Menu Static Block
Column Layout Header Top Right [store view]	6/12 ▼
Select Elements In Header Top Right [store view]	**Language** **Currency** **Search** **Cart** **User** Logo Menu Static Block
Select Layout Type Search [store view]	Type 2 ▼
Select Layout Type Cart [store view]	Type 2 ▼
Select Layout Type User [store view]	Type 2 ▼

- ✓ **Show Top Header:** allow showing the top header or not. The Top Header is divided into 3 parts: Header Top Left (the left of top header), Header Top Center (the center of top header) and Header Top Right (the right of top header).
- ✓ **Column Layout Header Top Left:** select number of columns to display elements in Header Top Left or select "Do Not Show" if you don't want to display any elements in Header Top Left.
- ✓ **Select Elements in Header Top Left:** select any elements you want in Header Top Left.
- ✓ **Column Layout Header Top Center:** select number of columns to display elements in Header Top Center or select "Do Not Show" if you don't want to display any elements in Header Top Center.
- ✓ **Select Elements in Header Top Center:** select any elements you want in Header Top Center.
- ✓ **Column Layout Header Top Right:** select number of columns to display elements in Header Top Right or select "Do Not Show" if you don't want to display any elements in Header Top Right.
- ✓ **Select Elements in Header Top Right:** select any elements you want in Header Top Right.
- ✓ **Select Layout Type Search:** select the search type you want.
- ✓ **Select Layout Type Cart:** select the cart type you want.
- ✓ **Select Layout Type User:** select the user type you want.

Note: In part "Select Element", you can select a custom static block and you have to fill the custom static block. Example: you can see image below:

Select Elements In Header Top Right [store view]	Language
	Currency
	Search
	Cart
	User
	Logo
	Menu
	Static Block

ID Static Block [store view]	block_link_menu_type3

✓ **ID Static Block:** fill in identifier of custom static block that you want to display in the top header. To get identifier, you go to Content -> Blocks -> copy identifier of custom block you want.

✓ Element of the Middle Header

Header - Midle

Show Header Middle [store view]	Yes ▼
Column Layout Header Middle Left [store view]	12/12 ▼
Select Elements In Header Middle Left [store view]	Language Currency Search Cart User Logo **Menu** Static Block
Column Layout Header Middle Center [store view]	Do not show ▼
Select Elements In Header Middle Center [store view]	Language Currency **Search** Cart User Logo Menu Static Block
Column Layout Header Middle Right [store view]	Do not show ▼
Select Elements In Header Middle Right [store view]	Language Currency Search **Cart** User Logo Menu Static Block

✓ **Show Header Middle:** allow showing the middle header or not. The Middle Header is divided into 3 parts: Header Middle Left (the left of middle header), Header Middle Center (the center of middle header) and Header Middle Right (the right of middle header).

Back On Top

13

- ✓ **Column Layout Header Middle Left:** select number of columns to display elements in Header Middle Left or select "Do Not Show" if you don't want to display any elements in Header Middle Left.
- ✓ **Select Elements in Header Middle Left:** select any elements you want in Header Middle Left.
- ✓ **Column Layout Header Middle Center:** select number of columns to display elements in Header Middle Center or select "Do Not Show" if you don't want to display any elements in Header Middle Center.
- ✓ **Select Elements in Header Middle Center:** select any elements you want in Header Middle Center.
- ✓ **Column Layout Header Middle Right:** select number of columns to display elements in Header Middle Right or select "Do Not Show" if you don't want to display any elements in Header Middle Right.
- ✓ **Select Elements in Header Middle Right:** select any elements you want in Header Middle Right.

Note: In part "Select Element", you can select a custom static block and you have to fill the custom static block. Example: you can see image below:

Back On Top

✓ **ID Static Block:** fill in identifier of custom static block that you want to display in the middle header. To get identifier, you go to Content -> Blocks -> copy identifier of custom block you want.

✓ **Element of the Bottom Header**

Header - Bottom

Show Header Bottom [store view]	Yes
Column Layout Header Bottom Left [store view]	3/12

Select Elements In Header Bottom Left [store view]

V. FAQ

Question 1: Do I receive the Product like your demo?

Answer: Yes, but after that you should change your logo, upload your own products. Our demo templates are for demo.

Question 2: Can I download the update of new version?

Answer: Yes, within 6 months of your single purchase, if we release and update the extension or template, we will include into the product download package on our download server, so you can download with the same download links in your confirmation email.

Question 3: How to configure extensions in this theme?

Answer: If you want to configure the extensions, you only follow the steps below:

On admin panel, you find this extension in menu sidebar. Example: You want to configure mega menu extension; you click on MEGAMENU in menu sidebar of admin panel.

You will choose the extension that you want to configure here. You can have more detail about configuration way in **3. Other Modules**

If you have many questions, please contact us here:

VI. Troubleshooting

1. After installing, Site cannot load CSS & JS

A: If you are facing problem of css and js page load design after installation, then you pls follow the steps below:

- Step 1: SSH to run command deploy: php bin/magento setup:static-content:deploy

 - Step 2: Reindex Magento, php bin/magento indexer:reindex

2. Your website frontend and backend not showing.

A: Change the owner of the uploaded files (pub and var) to the web server user and set correct file permissions for them. Login to Admin Panel, and Clear the cache.

3. Get 500 internal error when i use: php bin/magento setup:upgrade.

A: Change the owner of the uploaded files (pub and var) to the web server user and set correct file permissions for them.

4. Theme features don't work after installation or upgrade

A: If some theme features don't work after installation or some resources (e.g. images) are not displayed in the frontend, it often indicates problems with file permissions – your Magento doesn't have access to the theme files because of incorrect file permissions on your server.

5. Fatal error: Uncaught exception 'Magento\Framework\Exception\LocalizedException'

A: If you see the above error message, then pls try to set permission on pub and var directories.

6. Menu dropdown doesn't show?

A: In Cache Management, please try to flush the static files cache.

7. After installing if we reload or refresh the page two three times so it will not appear correctly?

A: Please try to enable merge javascript files in Stores > Settings > Configuration >

Advanced > Developer > JavaScript Settings.
